PROJECT

Title : Characterizing an in situ TiB² Particulates Reinforced Aluminium 707.1 based composite

Description : I have done the formation by making a composite of TiB² using the salts potassium fluoborite and potassium hexafluoro titanite in the intermediate temperatures of 700°, 750°, and 800° to regulate the volume fraction of TiB² formation in the aluminium salt.

Duration : 4 months

Role : Team head

No of members : 4
