Description:

Circulate Insure is a fully integrated Health Insurance Management System to fulfill All the needs of an insurance company. Any insurance company can use this system to manage their insurance business accordingly.

Our project is based on four models i.e Admin, Customer, Products & Agent. Here Customer can see all products details without login and after register can able to buy the insurance products. Also can maintain his/her profile with edit and update ,facility. customer can able to see the all-hospital list & details and can claim insurance policy through online portal. Also can download all policy doc's and certificate. And can give feedback regarding insurance company that review will visible for all customer including guests. Admin is responsible for to manage products, manage customer logins and access, manage agents & maintaining Agents. Product model is basically containing all health insurance products details with plan details and price details. Product model is maintained by the admin. User can compare two or more products. If anyone wants to become an agent for company, then he/she can register and has to sign all term & conditions of company. And can maintain his/her profile, basically they are the sales persons of the company.

Responsibilities :

- Developing code to implement different functionalities using C#, ASP.Net, MVC and WebApi.
- Analyzing and creating estimates for the stories of the project.
- Used JIRA as a project management and issue tracking tool.
- Creating and maintaining feature branches on git.
- Involved in writing DB queries by using Entity Framework.
- Implemented Validations using Validation Attributes & also worked on Filter Attributes.
