PROJECT HANDLED

The project focuses on supporting and developing the **Construction Retail Planning (CRP)** system, which helps construction equipment traders generate sales and business intelligence reports. These reports provide insights into sales performance and help identify areas for improvement. CRP is essential for effective supply chain and production planning, ensuring that the right resources, such as labor, machinery, and materials, are available when needed. The project involves managing the CRP application, monitoring batch jobs and reports, handling order tasks with sales staff, processing cancellation reports, and assisting users with database queries.
